1 Tables in L^AT_EX

For more detailed information on how to influence the printing location and order of a table, see the section on ‘Floating Bodies’ in the *The not so short introduction to LaTeX*, p. 41:

```
\begin{table}[!hbt]
```

h stands for here, *b* and *t* stand for bottom and top respectively and *p* gives L^AT_EX the choice to put the table in the best place. The ! before the letters forces L^AT_EX to put the table on this page at the location indicated.

To center a floating table the **centering** command must be used instead of the center environment because the latter inserts an undesired additional vertical space (see Mori, p. 8).

Table 1: This table is at the bottom, because we used !b. The exclamation mark tells L^AT_EX that we are really serious about the placement of this table.

	2000 (<i>n</i> =1308)	2002 (<i>n</i> =1760)	2004 (<i>n</i> =830)
n_1^*	388	466	197
n_2^*	920	1294	633
$\hat{\pi}_1$	0.16	0.10	0.07
95% CI	[0.13, 0.19]	[0.07, 0.13]	[0.03, 0.11]

Table 2: This table is sideways, something that not all journals accept. It is still pretty handy, though.

Table 3: This table is a bit more complex, with a lot of visual typesetting by hand. It is very easy to create this table, though. And the caption is at the bottom of the table.

Table 4: This table is horribly wrong. It does not fit on the page. Maybe rotating it would solve it, but we may also make the table a bit smaller. The table uses an interesting scheme of multiple rows and columns. Also the caption is at the top of the table. That is nice.
